

FORMULA® HYDRAULIC COMPONENTS

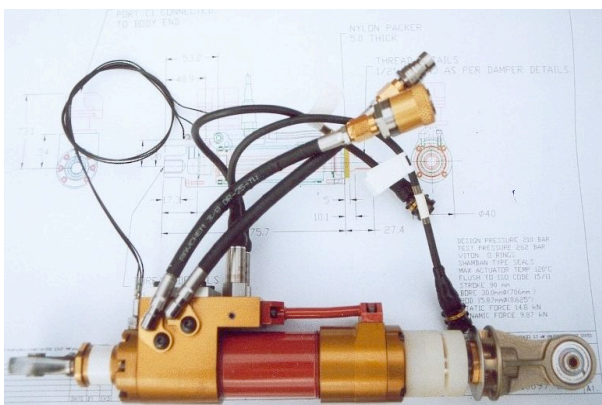

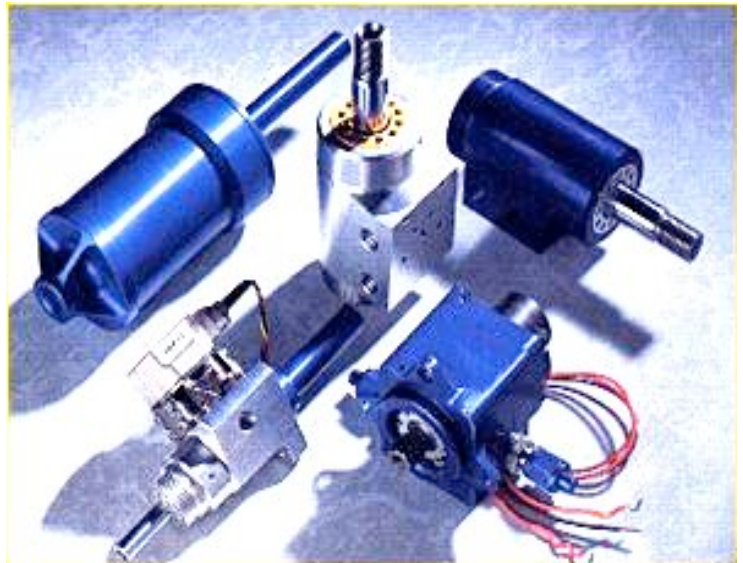

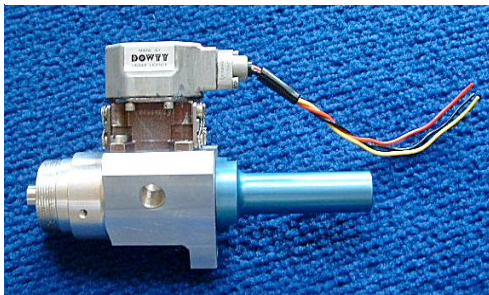

Folliard Hydraulics Ltd have been producing hydraulic components for the automotive industries for the last 25 years.

We specialise in the design, production and testing of linear and rotary actuators, with inbuilt displacement transducers, pressure transducers and valving.

Our products have been used on Formula 1, road and rally cars.

F1 teams use our actuators on test cars to obtain the best ride height and balance, before configuring the racecar to the optimum set-up.

Other components include throttle blipper, clutch, gearbox selector, steering, suspension valving and bootstrap reservoirs.

Complete circuit design with manifold, pumps and valves can be supplied.

We can supply a discrete and practical solution for your hydraulic requirements for the most demanding applications.
